

Floating Shelves with P-System

“Installing pre-finished, miter-wrapped, floating shelves in an alcove (that are often out of square) adds a level of difficulty that is hard to overcome with traditional methods. Using the P-System connectors across the miters allows for each individual piece to be scribed to fit the space and then securely fastened together without a risk of damaging the finished surfaces.”

Matt Moore, Owner, Matt Moore Designs, Jacksonville, FL

How it works:

1.

Establish control line for front edge; then scribe left, right and back edges of shelf

2.

Transfer scribe lines to shelf components

3.

Lay out center lines for connector slots

4.

Machine slots, referencing finished side with stop square

5.

Install Tenso female halves into shelf top and bottom edges

6.

Install Tenso male halves in fascia edges. Use pre-load clips

7.

Install top on cleats with gravity; bottom headless-pinned at back edge

8.

Apply glue, snap fascia to bottom first, then hinge together to snap top to fascia

9.

No visible connectors on beveled edges
